

## REMARKS

It is the object of the present invention to provide a multi-action particle for structuring biological media and a method for altering the surface structure of ultra-disperse particles to allow predetermined interactions to take place in biological media.

The preliminary amendment, provided herein, focuses the invention on the structure of the nano-particle, by further defining its composition.

In view of the foregoing remarks, all of the claims in the application are deemed to be allowable. Further reconsideration and allowance of the application is respectfully requested at an early date.
